

Wire Lubricant (for enamelled wires)

cenvar Insulating Varnishes, Resins & Wire Enamels

**Available
in 1 ltr &
5 ltr pack**

- Reduces coefficient of friction on enamelled wire surface.
- Improves windability during coil winding applications.
- Low viscosity solution. Ready to apply.
- Applied on enamelled wires felt using capillary action or by metering pump.

Chetak Manufacturing Co. expertises in the manufacturing of various types of wire enamels and insulating varnishes. This has lead to the development of the product *cenvar* WL, an ideal lubricant to be applied on enamelled wires for better windability. It is based on high quality wax.

cenvar WL is suitable for both aluminium & copper enamelled round wires. Also suitable for all sizes and all general types of single and dual coat enamels.

Application Method:

Use metering pump or apply by felt using capillary method.

Note:

Keep the solution in an air tight container. Close the container's lid tightly, immediately after application.

Shelf life is six months when kept in air tight container.
